

NEIGHBORHOOD REVITALIZATION

The City of Birmingham is continuing its work to stabilize and revitalize neighborhoods by removing blighted structures in all 9 districts. The Department of Planning, Engineering and Permits identified more than 30 non-residential structures for demolition beginning in July. The demolition of non-residential structures is a two-step process. First, the city must assess and remove any asbestos from the structure. Second, the city demolishes and removes the structure.
